What is an Air Source Heat Pump?

An Air Source Heat Pump is a renewable energy product which takes residual heat from the air, and uses it to provide buildings with heating and hot water.

Why Solid Renewables?

- Extensive experience in the renewable energy sector
- A flexible and personal service
- All installations are fully project managed from start to finish
- Competitive cost structure
- High quality materials used on all installations
- Members of the Renewable Energy Consumer Code
- All installations come with a full warranty*
- Ongoing maintenance contracts available

Illustrated savings Oil Boiler v Air Source Heat Pump:

On a **COMMERCIAL** building/office block with an oil boiler with 130kW heat loss and 2500 heating hours per year (Total energy consumption of 325,000 kWh)

	Annual Running Costs	Savings/Income
Oil boiler	£22,941	
Air Source Heat Pump	£11,500	£11,441
RHI Payment per annum for 20 years		£8,352
Total Savings		£19,793

One-off supply and installation cost of Heat Source air pump: £120,384
Therefore, the heat pump is self-financing in just over 6 years, and profitable every year thereafter.

For the **DOMESTIC** sector, the RHI rate has increased to 10.18p per kWh, subject to a cap of 20,000 kWh – which is well within the majority of domestic installations, and equates to potential savings of £14,252 over seven years.

Benefits of Air Source Heat Pumps

- Ideal for both domestic and commercial buildings
- Decreased fuel bills and eliminates fuel deliveries
- Income generation via the Renewable Heat Incentive (RHI)
- Lower Carbon Emissions
- Minimal ongoing maintenance
- Easy integration with existing heating systems
- Financing Options available
